

FDA Assignment Template

Use the FDA Assignment Template (fda_assignmentTemplate.) to display your assignments on an HTML page when turning them in. The template consists of an index file and a resources folder.

Name your Flash file 'assignment fla' and place it in the resources/flash folder. When you publish your movie the SWF (assignment.swf) will be created in that directory.

The index file is the HTML file that holds the assignment SWF file. You may need to change the dimensions of the SWF in the HTML file depending on the assignment. Follow the instructions in the HTML file to change the dimensions. The code below is the code you will need to edit.

```
<!-- Change the dimensions of the SWF using the width and height variables below -->  
var width = 800;  
var height = 400;
```

The HTML file is also where you add your name, the assignment, and any required details for the assignment.

Since fonts cannot be embedded in Flash files please place any unique fonts in the resources/fonts folder.

All assignments must be turned in using this template. Before you turn in an assignment rename the folder 'last_first_assignmentName.zip'.

Do not use the assignment template when turning in class activities.
